

Thermal Year 2024-2025 Injection Performances - Peak Modulation service

Injection Capacity for the Peak Modulation service pursuant to article 1 of D.M. 28 March 2024 of Edison Stoccaggio.

Edison Stoccaggio defines the Injection capacity for the modulation peak service (PI_{MODP}), expressed in kWh/d, that the User can utilize in every Gas-Day during the contractual period.

During the Injection Period, the PI_{mod} is defined on the basis of the overall injection curve of the hub storage, reprocessed through the definition of the intervals, in order to take into account the actual volumes injected in the storage by the User.

In accordance with the art. 10 of the Annex A of the deliberation 67/2019/R/gas, with the aim to guarantee the adequate flexibility to the User during the Injection Period, Edison Stoccaggio determines the minimum and maximum stock allowed to the User at the end of every month of such period, with reference to the capacity assigned to the User.

During the **Injection period**, the **Injection Capacity** (expressed in kWh/d) is equal to:

Period		PI_{MODP}
01/04/2024	15/04/2024	27.450.000
16/04/2024	30/04/2024	36.950.000
01/05/2024	31/05/2024	72.650.000
01/06/2024	30/09/2024	61.752.500
01/10/2024	15/10/2024	20.000.000
16/10/2024	31/10/2024	8.500.000

Injection Performance (PI_{MODP}) valid during the Injection period are set here below, while the value of PI_{MODP} during Withdrawal Period is equal to 9,444,500 kWh/d:
